

EXAMPLE OF A DISCHARGE POINT WITH MULTIPLE EMISSION SOURCES

On the chloroprene tab of the Modeling spreadsheet, the sources highlighted in pink do not discharge directly to the atmosphere, these sources are routed through one of the vents listed in rows 1 through 39. For example sources NEO 222 thru 226 (rows 99 to 103) discharge through vent RPN015 which is source NEOR15 (row 1). Only the sources on rows 1 through 39 should be modeled. See example below.
